

## To Do List for Laptop Ubuntu Perfection

- ☐ PDF Viewer
  - Tabbed PDF's with commands
  - Seamless scrolling between pages
  - Looks good
- ☐ DrawBoardPDF Alternative
- ☒ NeoVim Live-Preview *with* images
  - ☐ Able to auto insert bullet points
  - ☒ Able to paste in images
  - ☐ Able to make and store PDF's
    - \* Once get this, make command to upload PDF's to DropBox

## Testing Math

- Use the expression:  $\frac{a}{b}$

Here is the formula:

$$\sum_{i=5}^{43} = \frac{E = mc^2}{\hat{x} - \bar{x}}$$

## Test Section

- Markdown is dope as fuck holy shit
- Here is an image of a ducky wucky so darn cute.

What to put here

### A Sub-Section

- We can also insert code blocks:

```
#include <stdio.h>

int main() {

    char message[] = "Hello World!";

    printf("%s", message);

    return 0;
}
```

*Likely by default I should use the ## headers in the “natural” Markdown*

## Another Section

- Today We will learn about linux terminal commands

### Navigation

- cd [option] -> Change Directory
- ls -> lists all files and folders in current directory
- pwd -> print the current working directory
- touch [filename] -> creates a file
- mkdir [name] -> makes a directory
- rm [file] -> removes a file
  - add -rf to remove folders/directories

### Tools

- htop -> shows processes and their hardware consumption
- neofetch -> shows system information

## Section To test myself

- Here I will be looking at the live-preview side
- To see if it is feasible, but there is no cursor
- so honestly I'll stick to Neovim
